Ins: Medicare Southern Region

01/09/2019 - Office Visit

Provider: Mukesh Misra MD

Location of Care: Antelope Valley Neuroscience Medical Group

History of Present Illness:

I saw DARLEAN SCOTT in the office today for a followup consultation. She is a 54 year old woman with the complaint of neck pain. low back pain. bilateral leg pain. The patient is followed for ongoing low back issues and pain issues. Patient remains on fairly high dose of narcotics. Chronic pain management discussed with patient at length. Her discussed the option of spinal cord stimulator trial with the patient at this time. I wasn't provided information to the patient regarding spinal cord stimulator trial. At this time it seems she is possibly leaning towards that. Patient however will get back to us and let us make a consent of spinal cord stimulator trial for her. Treatment plan and risk/benefits discussed with patient
