Ins: 105

07/02/2025 - Office Visit

Provider: Abdallah S Farrukh MD

Location of Care: Antelope Valley Neuroscience Medical Group

History of Present Illness:

So pristine as neck pain today she demonstrated 5/10 for can go as high as 8/10 in the lowest get this to and went over how the patient takes her tramadol to take it 50 mg twice a day sometimes she has to take weak and she will be driving at that time so I suggested that we do rather have her take nonnarcotic medication the patient overall preferred gabapentin to current Lyrica her past dose of gabapentin was 300 mg 3 times a day and I will go ahead and prescribe 100 mg tablet up to 3x3 times a day so the patient may be able to take less if she feels that the 300 mg is sedating her the key is to allow the patient to be able to drive him function as a real estate agent without compromising her intellect or attentiveness

Otherwise when evaluated she is fully awake alert

Cranial examination 2-12 is within normal limits her drift is negative

The will renew her tramadol and gabapentin and we will see her back in 30 days she did well with appendicular cerebellar activity she ambulate reasonably well

Active Medications:

gabapentin 100 mg capsule (gabapentin) Take 1 capsule by mouth three times a day as directed
tramadol 50 mg tablet (tramadol) Take 1 tablet by mouth once a day as needed for pain
pregabalin 50 mg capsule (pregabalin) Take 1 capsule by mouth three times a day as directed
