04/23/2025 - Office Visit

Provider: Abdallah S Farrukh MD

Location of Care: Antelope Valley Neuroscience Medical Group

History of Present Illness:

So I saw Maria Dolores Cammarano and she continued to have significant amount of back pain more so on the left side she has pain that traveled down the left lower extremity with pain diffusely over the foot throughout the whole foot the knee distribution of pain is L4-L5 on the left back pain worse than her leg pain..

She had fusion and pedicle screw placed at medical side 4 and 3 and she has spondylolisthesis at L5-S1 She was started on Forteo and hoping that I give her injections for the pain comes down she can be able to survive without pain until such a time the bone density is strong enough for her to undergo surgery

Currently she is taking Lyrica 75 mg capsule 1 tablet by mouth twice a day and Norco 10/3 2 5 every 6 hours when necessary for pain she is not taking any muscle relaxant. None

Patient seems to also take Aricept, memantine, and bumetanide she also takes Plavix and and she takes trazodone for sleep and there is no ill effect from the combination of medication at the patient whenever she has a bad cold she does use an inhaler in the form of albuterol sulfate

Otherwise the patient is fully awake alert oriented x3 her cranial nerve examination is fully within normal limits

She did well with appendicular cerebellar activity

Muscle tone upper extremity within normal limits muscle lower extremity within normal limits

For now the patient saw Dr. Singh the patient advised me she does not want to change provider Henson she had a second opinion I would like to reiterate the rectum my recommendation to perform a facet injection at L5-S1 and L1-L2 and L2-L3 given the fact that she has screws into L3-L4 and L5 these facets at L3-L4 L4-5 and L2-L3 may not be assessed through the inferior fossae again as access L2-L3 by injecting injecting the superior lateral aspect of the joint that is a peri-facet injection which will also anesthetize the recurrent nerve Luschka now the patient is safer in the surgery center the patient preferred to go to surgThe patient preferred to have the procedure done at surgery Center with sedation

As far as patient's home situation the patient for now has aged with significant MRF spinal pain and disability due to back pain and weakness in the left lower extremity.

The patient is unable given her current condition is to care for herself she needs assistance with bathing,

Cooking, cleaning house, and and getting a shower at time to go to the restroom so the patient should have in my opinion significant MRF and social assistant and in in the ways to sustain her survival for now the family is providing 24-hour care and for the patient however they do not have the capability of continue to do 24-hour care so would like to see if social service can replace the services that the family is providing. A lumbar facet injection is recommended at L1-L2, L2-L3, L5-S1 bilateral.

Active Medications:

Medrol (Pak) 4 mg tablets in a dose pack (methylprednisolone) Take 1 tablet by mouth as directed as directed following package instructions

hydrocodone 10 mg-acetaminophen 325 mg tablet (hydrocodone-acetaminophen) Take 1 tablet by mouth every six hours as needed for pain

pregabalin 75 mg capsule (pregabalin) Take 1 capsule by mouth twice a day as directed

Aricept 10 mg tablet (donepezil) Take 1 tablet by mouth once a day

Location: left hip, left leg, left groin
Intensity: 8

Allergies: Allergies were reviewed with the patient during this visit.

Impression & Recommendations:

Problem # 1: Lumbar spondylolisthesis (ICD-738.4) (ICD10-M43.16)

Orders:

99213-FU, EXPANDED (CPT-99213)
FACET BLOCK LUMBAR (FB LU)

Problem # 2: Thoracic spondylolisthesis (ICD-738.4) (ICD10-M43.14)

Orders:

99213-FU, EXPANDED (CPT-99213)

Problem # 3: Cervical spondylolisthesis (ICD-738.4) (ICD10-M43.12)

Orders:

99213-FU, EXPANDED (CPT-99213)

Problem # 4: Lumbar disc disorder (ICD-722.93) (ICD10-M51.86)

Orders:

99213-FU, EXPANDED (CPT-99213)
FACET BLOCK LUMBAR (FB LU)

Patient Instructions:

1) Please schedule a follow-up appointment in 1 month.

Medications:

Rx of hydrocodone 10 mg-acetaminophen 325 mg tablet (hydrocodone-acetaminophen)

Take 1 tablet by mouth every six hours as needed for pain; #120 tablet x 0; Signed;

Entered by: Tiffany McBride; Authorized by: Abdallah S Farrukh MD;
