07/02/2025 - Office Visit

Provider: Abdallah S Farrukh MD

Location of Care: Antelope Valley Neuroscience Medical Group

History of Present Illness:

Okay so the things am going to try to evaluate and find the etiology of her complaint she get this electric discharges that goes from her neck all the way down the arms on the leg and she is to have numbness in the calf before the surgery distill their so that every now and then she gets this shocking electric discharge is electric discharges the last momentarily and they can be from 2-4 times a day therefore than that there all the time

She remained with numbness in both hands test decompression of the carpal tunnel

So patient says her neck pain in the left especially when she had surgery and the cyst was removed is 9/10 when she takes her medication the pain can go down all the way to 1/10 for few hours until she can pain comes back and she takes pain

Right so we will plan to do CT scan of the cervical spine with and without contrast MRI of the cervical spine with and without contrast we should also do soft tissue so we will order an MRI of the cervical spine with the neck with and without contrast so we can look at the soft tissue deceived there is any evidence of lymphadenopathy especially that she had had neck surgery as well and the pain at the neck of the thigh from the below the ear all the way to the shoulder to there is no question the patient right lateral rotation is almost forward left cogitation painful limited only to 10° PFF otherwise mentation is clear she is awake alert oriented x3 pupils are equal and reactive there is no limitation of upgaze no demeaning nystagmus patient did well with upper appendicular cerebellar activity muscle tone upper extremity within normal limits muscle tone lower extremity within normal limits there is no long tract signs

Patient does not report any ill effect from the intake medication it has a very substantial improvement in her neck pain and a refill her medication for
