

DARLENE BULLARD

Female DOB: 12/24/1950

187124

Ins: Medicare Southern Region

06/17/2025 - Office Visit: INITIAL CONSULT

Provider: Manprit K Dhillon MD

Location of Care: Antelope Valley Neuroscience Medical Group

History of Present Illness:

I saw DARLENE BULLARD in the office today for an initial consultation. She is a 74 year old woman with the complaint of low back pain involving her left hip, buttock, and posterior thigh. She previously underwent a right hip injection by Dr. Omar Farrukh with good relief of pain. She denies any numbness, tingling, or weakness of the legs or any bowel or bladder incontinence. She has no best position and therefore can have pain with sitting, standing, walking, and lying down.

She has previously undergone physical therapy with transient relief. She has not been to the chiropractor or had spine injections and takes Advil.

She takes Tylenol Extra Strength and Advil when necessary.

She has not had a recent MRI of the lumbar spine.

Active Medications:

baclofen 5 mg tablet (baclofen) Take 1 tablet by mouth twice a day as needed muscle spasms for 7 days
Celebrex 200 mg capsule (celecoxib) Take 1 capsule by mouth once a day as directed

Current Allergies:

PENICILLIN (PENICILLIN V POTASSIUM) (Critical)
