**07/02/2025 - Office Visit**

**Provider: Abdallah S Farrukh MD**

**Location of Care: Antelope Valley Neuroscience Medical Group**

**History of Present Illness:**

So isolated today her biggest issue is her shoulder and neck pain she said the pain in the shoulder neck is disabling her by the facet injection lumbar spine is at significant improvement in her pain experience and lumbar spine and she actually says he hardly have any pain down the legs as well as of the injection back helped her back pain buttock pain and referred leg pain she did have true sciatica she is referred leg pain but no true sciatica she also reports 50% improvement of her neck pain with the medication not helping the shoulder is much

When evaluated she is fully awake alert oriented x3 pupils are equal and reactive there is no limitation of upward gaze no down beating nystagmus, extraocular muscle movement which is nerve III 4 6 is for face symmetric shoulder shrug on the left disc curtailed due to the severe pain and swelling PFF

The patient is able to have full range of motion the right side left side she has loss of abduction flexion extension she was almost 90% of these range of motion specifically the abduction she has loss of 90% and flexion she did about 15° extension was 5° at best Peno prepped

Range of motion to the right she did 60° right lateral rotation 15° tilt to the right 5° tilt to the left lateral rotation was 5° at best PFF

Patient reports adequate pain experience with the intake medication without side effect she meets the 4 as of analgesia I will refill her medication. Again I am recommending facet injection at C3-C4 C4-5 C5-6 with a posterior subacromial injection of the left shoulder

**Active Medications:**
