Location of Care: Antelope Valley Neuroscience Medical Group

History of Present Illness:

So John Smith unfortunately is not complying and he is definitely noticing aberrant behavior is been shopping for medication from different physicians—however he has a list of all the medications taking Significant mild necessary duplication of prescriptions

Satisfied concerned I was trying to get the patient and his wife walkers and a base dose of Cymbalta had to be controlled by Dr. Imani Dr. Imani has to work on his emotional stability and have him to become compliant with our recommendations medication number what pain is he may go to the emergency room for getting Toradol injections on

Today I will work with Dr. Imani to create a map of medication the by contract and advice and any physician who provided the contracts will subject acromial prosecution including myself because these are controlled substances out to be aware of the condition satisfied with last prescription we gave the patient was pregabalin 100 mg he takes 3 tablets per day so want to take the pregabalin 100 mg every 8 hours first takes the Norco on the there is breakthrough pain and I gave him 60 tablets of Norco to use 1 tablet every 6 hours when necessary for pain over 15 days. The patient received Cymbalta there is a prescription from Dr. Imani prescription from Dr. canal I will talk to Dr. Canal Imani and like to have Dr. Imani controlled the Cymbalta

Her so I explained

For now the patient is taking hydroxyzine 25 mg 3 tabs per day the patient and get that prescribed from his primary care physician I discussed that with Dr. Imani

This into that the patient take care arm Indocin 25 mg,

He does take a laxative in the form of Dulcolax,

He is in cardiac medication in the form of Cordaro on valsartan and a diuretic in the form of HCTZ he takes Plavix he take gym Tessa GMT ESA he takes amiodarone Bayer aspirin Lipitor and Norco he had a prescription of muscles carbamoyl from Omar. No

The patient had a fall and had a bruise in the left rib went to the emergency room no fractures Patient is kyphotic he has no paraspinal muscle spasm no sciatica today advised him for now the key is how to get him into compliance and safety I will talk to Dr. canal about him sticking only to the arm cardiac medication I will find a from Dr. canal and his rationale for ordering Cymbalta

Active Medications:

hydrocodone 5 mg-acetaminophen 325 mg tablet (hydrocodone-acetaminophen) Take 1 tablet by mouth every six hours as needed for pain
